## nodefactinfo

Query puppetdb via the cli to get node and fact information

• Free software: BSD license

• Documentation: http://nodefactinfo.rtfd.org.

### **Features**

• TODO

Installation

#### At the command line:

\$ easy\_install nodefactinfo

#### Or, if you have virtualenvwrapper installed:

\$ mkvirtualenv nodefactinfo
\$ pip install nodefactinfo

ш	ΛГ	דכ	F	$\Box$	-
П	4 r	- 1		П.	

Usage

To use nodefactinfo in a project:

import nodefactinfo

8 Chapter 3. Usage

## Contributing

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

### **Types of Contributions**

#### **Report Bugs**

Report bugs at https://github.com/daniellawrence/nodefactinfo/issues.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

#### **Fix Bugs**

Look through the GitHub issues for bugs. Anything tagged with "bug" is open to whoever wants to implement it.

#### **Implement Features**

Look through the GitHub issues for features. Anything tagged with "feature" is open to whoever wants to implement it.

#### **Write Documentation**

nodefactinfo could always use more documentation, whether as part of the official nodefactinfo docs, in docstrings, or even on the web in blog posts, articles, and such.

#### **Submit Feedback**

The best way to send feedback is to file an issue at https://github.com/daniellawrence/nodefactinfo/issues.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome:)

#### **Get Started!**

Ready to contribute? Here's how to set up nodefactinfo for local development.

- 1. Fork the nodefactinfo repo on GitHub.
- 2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/nodefactinfo.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv nodefactinfo
$ cd nodefactinfo/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ flake8 nodefactinfo tests
$ python setup.py test
$ tox
```

To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

## **Pull Request Guidelines**

Before you submit a pull request, check that it meets these guidelines:

- 1. The pull request should include tests.
- 2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
- 3. The pull request should work for Python 2.6, 2.7, and 3.3, and for PyPy. Check https://travis-ci.org/daniellawrence/nodefactinfo/pull\_requests and make sure that the tests pass for all supported Python versions.

### **Tips**

To run a subset of tests:

\$ python -m unittest tests.test\_nodefactinfo

Credits

## **Development Lead**

• Daniel Lawrence <dannyla@linux.com>

### **Contributors**

None yet. Why not be the first?
